Zinc amino acid chelate equiv. zinc	80 mg 16 mg
Zinc gluconate equiv. zinc	93.36 mg 12 mg
Total zinc	50 mg

ZINC FOR ATHLETES

IMMUNITY | MINERAL

Zinc is a mineral co-factor in hundreds of enzymatic reactions and essential to the normal function of the immune system.

Zinc Immune Training Advantage has been formulated with three highly bioavailable and absorbable forms of Zinc for maximal results:

- Zinc citrate dihydrate
- Zinc amino acid chelate
- Zinc gluconate

Zinc is essential mineral to keep the immune system strong. For athletes, this is especially important, since being sidelined with a viral infection or other illness can mean missing valuable training time.

► HOW ZINC WORKS?

When a virus or bacteria invades your body, zinc travels to key cells that help fight against infection and ensures that inflammation does not spiral out of control. Having adequate levels of zinc means your immune system is firing at optimal levels to avoid sickness and subsequent lost training time.

If symptoms persist, consult a healthcare professional. Vitamin supplements should not replace a balanced diet. Do not use if seal is broken. Store below 30°C. Warning: Contains Zinc which may be dangerous if taken in large amounts or for a long period.
